Food Matters

FACT SHEET

WAYNE STATE UNIVERSITY | DETROIT, MICHIGAN | WWW.CURES.WAYNE.EDU

Making Good Choices Benefits Everyone

Purchasing organically grown food reduces the amount of chemicals you're ingesting. You're also reducing the amount of chemicals in the air, our water supply, soil, and bodies.

Local food has more nutrients!

Since the food doesn't have to travel far, there is less time for the nutrient value to decrease.

Buying locally grown produce boosts the local economy. Local farmers reinvest their earnings by spending money in the communities they live in.

By purchasing local foods you reduce the environmental impact of transporting food from longer geographic distances. Remember, the choices you make not only impact your individual health, but also help improve our environmental health.

Community Questions

Answers to our most frequently asked questions regarding food

Q. Can you reduce the amount of mercury in fish by cooking it a certain way?

A. No. No matter how you clean or cook your fish, you can't reduce the amount of mercury. Choosing fish that are low in mercury is the best way to reduce exposure to it.

Q. Where does mercury come from?

A. Coal burning power plants have increased the amount of airborne mercury that eventually ends up in our water. Mercury enters the marine food chain and "bioaccumulates" or builds up from small fish consumed by bigger fish. That's why bigger fish tend to have more mercury content than smaller ones.

Tips

HOW TO STRETCH YOUR DOLLAR IN THE "D"

Spend SNAP dollars at Eastern Market and other local farmers markets that double the value of SNAP points. **See back for list.**

DOUBLE UP FOOD BUCKS™

Buy produce that's in season, it's cheaper. Plus you'll support local farmers! **See Back.**

Grow your own food! A garden is a great way to save money.
